SUMMARY

Javascript | React | Data Visualization | Full stack

Ambitious computer enthusiast with strong experience in building pixel-perfect interactive data visualization web apps and an active contributor to opensource.

I've worked on scalable, single-solution driven diverse projects

Most of the time I am involved in implementing optimal user experience for the frontend and sometimes developing backend features.

EXPERIENCE

Salesforce

Software Engineer

April 2021 - Present

I am working on a Salesforce Commerce Cloud product focused on mobile first approach. I work parallel with international partner organisations helping them in implementing and getting feedback, improving product for beta launch.

R Systems

Senior Software Engineer

Dec 2019 - April 2021

Worked on data visualization and real-time asset tracking, health monitoring dashboard. Worked on SEO optimized, dynamic content generated server-side rendered Ecommerce platform.

Quality Council of India

Software Engineer

Jan 2017 - Nov 2019

Involved in developing & maintaining in-house data visualized platforms and web apps. Developed scalable solutions to execute huge traffic oriented platforms with varying network coverage.

HCL

IT Admin

April 2015 - Jan 2017

I was part of a team providing SFDC administrator support to clients, resolving real-time queries, designing and developing SFDC organization structures.

Innovative Medequus

Co-founder, Developer

March 2014 - Jan 2015

Co-Founded and developed an online healthcare platform to facilitate patient management. Being an early-stage startup I was able to get myself involved in all of the phases of SDLC.
